Fleet Safety, Security & Environmental Policy

Safety Management System, ISPS security, MARPOL compliance and decarbonisation

Document ID	OX-FLT-001	**Version**	7.0
Effective date	2026-01-01	**Next review**	2027-01-01
Policy owner	Capt. Rafael Duarte, Director, Fleet & Marine Safety (Designated Person Ashore)	**Approved by**	Adrian Koh Wei Ming, Group CEO
Applies to	All owned and bareboat-chartered vessels, OceanX Ship Management and shore fleet teams	**Classification**	Public

1. Policy statement

OceanX Logistics is committed to: - the safety of life at sea - preventing injury and loss of life - protecting the marine environment - protecting the property of our customers and our company

We comply with all applicable international conventions, flag-state and port-state requirements, and set our own standards higher where reasonably practicable.

2. Fleet overview (as of 1 January 2026)

Item	Figure
Owned vessels	38
Long-term chartered vessels	21
Total capacity	412,000 TEU
Average fleet age	9.6 years
LNG dual-fuel vessels	6 (8 more on order, delivery 2027-2029)
Flags	Singapore, Liberia, Marshall Islands, Panama
Classification societies	DNV, Lloyd's Register, ABS

Example vessels: *OX Meridian* (15,200 TEU, 2019), *OX Nordlys* (16,000 TEU, LNG dual-fuel, 2024), *OX Monsoon* (2,700 TEU feeder, 2012).

3. Safety Management System (ISM Code)

- Every vessel holds a valid **Safety Management Certificate** and every operating entity a **Document of Compliance**.
- The **Designated Person Ashore (DPA)** has direct access to the Group CEO and can be reached 24/7 on +65 6555 0900.
- The Master has **overriding authority** to make decisions on safety and pollution prevention, and to request company assistance.
- Internal ISM audits are held every 12 months per vessel; management review is held twice a year.
- Near-miss reporting target: at least 4 reports per vessel per month. Reports are non-punitive.

3.1 Safety performance targets 2026

KPI	Target	2025 actual
Lost Time Injury Frequency (per million hrs)	< 0.50	0.62
Fatalities	0	0
Port State Control detentions	0	1
PSC deficiencies per inspection	< 1.0	1.3
Oil spills to sea	0	0

4. Maintenance and dry-docking

- A Planned Maintenance System (PMS) is in place for all critical equipment. Overdue critical jobs are escalated to the Fleet Superintendent within 24 hours.
- Dry-docking takes place every 5 years, with an intermediate in-water survey at 2.5 years (class approval required).
- Hull cleaning and propeller polishing are scheduled on performance data to reduce fuel use.

5. Ship and port security (ISPS Code)

- Each vessel has an approved Ship Security Plan and a trained Ship Security Officer. The Company Security Officer is reachable 24/7.
- High-risk areas (Gulf of Aden, Red Sea, Gulf of Guinea, Sulu-Celebes Sea) need a voyage-specific risk assessment. Best Management Practices (BMP5 / BMP West Africa) are applied.
- Armed guards are used only where flag-state law allows it and the Security Committee approves.
- Stowaway, drug-smuggling and cyber threats are covered in the security plan and in annual drills.

6. Environmental protection

6.1 MARPOL compliance

- **Annex I (oil):** oily water separators are sealed and monitored; Oil Record Book entries are audited.

- **Annex V (garbage):** plastics are never discharged; all waste is segregated and landed ashore.
- **Annex VI (air):** sulphur cap of 0.50% globally and 0.10% in Emission Control Areas (North America, Baltic, North Sea, Mediterranean from May 2025).
- **Ballast Water Management Convention:** type-approved BWMS fitted on 100% of owned vessels.

6.2 Decarbonisation roadmap

Milestone	Target
2030	-40% carbon intensity (gCO2/TEU-km) vs 2008; 20% of fleet capable of zero-carbon fuel
2040	-70% absolute GHG emissions vs 2008
2050	Net-zero across owned fleet (IMO 2023 Revised GHG Strategy)

All vessels hold a valid EEXI certificate and an approved SEEMP Part III. Ships rated D for CII for two consecutive years, or E in any year, receive a corrective action plan within 3 months.

6.3 EU ETS and FuelEU Maritime

OceanX reports emissions under EU MRV and surrenders EU Allowances for voyages to and from EU ports. FuelEU Maritime compliance (2% GHG intensity reduction from 2025) is managed across the fleet through pooling.

7. Port State Control readiness

A pre-arrival checklist is completed 72 hours before arrival at ports with targeted inspection regimes (Paris MoU, Tokyo MoU, USCG). Any deficiency is closed out with root-cause analysis within 30 days.

8. Emergency preparedness

- Shipboard drills: fire and abandon ship monthly; enclosed space entry every 2 months; SOPEP oil spill drill every 3 months.
- A shore-based Emergency Response Team exercise with a simulated casualty is held twice a year.
- 24/7 Emergency Response Centre: +65 6555 0911.

9. Responsibilities

The Group CEO is ultimately accountable for this policy. The DPA and Fleet Directors implement it. Every seafarer and shore employee has the authority and duty to **stop work** if they believe it is unsafe.

OceanX Logistics is a fictional company created for AI training and demonstration. All names, addresses, vessels, registration numbers and figures are invented.
